Accessories

Depending on customers preferences, the SPR300 comes fully equipped and ready to deploy straight from the case. This includes the following accessories, which every professional operator will appreciate.

1. Deceet Carry Bag (Included) – This ingeniously designed and durable bag transports the SPR300 with MOLLE interior for the proper placement of all accessories, tools and rifle components.

2. Brass Catcher (Included) – The B&T designed brass catcher can be quickly mounted without tools on a small additional rail next to the chamber. It pivots easily and swift for manipulations and safety inspections.

3. Two 10 round magazines (Included) – These translucent magazines, also used with the Swiss Army assault rifle (Stgw 90), give the operator the choice of a quick reload.

4. Accessories (Included) – a foldable and extendable bipod (two types available on customers choice), pistol grip modules (palm & finger rests), a quick detachable carrying sling and a cleaning kit.

5. Scope (optional) – the SPR300 can be equipped with a variety of scopes and mounts. B&T offers special scopes suitable for the trajectory of the .300 Whisper and the .300 ACC Blackout.

B&T is certified as per ISO 9001 quality and ISO 14001 environmental management standards

SPR300 - SPECIAL PURPOSE RIFLE .300 WHISPER / .300 AAC BLACKOUT

Designed for today's urban challenges, for Police, SWAT or Military, the SPR300 is the ultimate rifle when maximum accuracy, sound and flash reduction is required. Utilizing the .300 Whisper or the .300 AAC Blackout cartridge, it is the perfect tool for all sniping missions up to 150 meters / 165 yards.

SPR300 – SPECIAL PURP

Folding Adjustable Stock

There are two different positive locking folding stocks available, which will reduce the length of the SPR300 up to 280mm. Both have an height adjustable cheek piece giving the operator an optimal and relaxed position behind any scope, while one stock is also adjustable in length.

3 Position Safety / Fire Selector

The 3 position safety provides the user an easy and positive selection of Safe and Fire while the middle position allows to load and unload the gun with a blocked trigger.

Cocked Bolt Indicator

The cocked bolt indicator enables the operator to see and feel if the bolt is cocked.

Trigger

The single stage trigger fires at a crisp 1,4 kg for maximum accuracy.

Pistol Grip

The interchangeable palm and finger inserts allow a perfect adaptation to the hand of the operator.

Reliable Magazines

The magazines are made from a tough translucent polymer. The operator can quickly reload or change ammunition as required by the mission.

The modern police sniper almost always has engagements in urban environments in close ranges (less than 150 m). For military special operations urban areas provide a growing challenge. Many military strategists are projecting future conflicts will take place in cities and other built up areas where the distances are much closer. That is where the SPR300 comes into its own.

The weapon breaks down into a very small package which will enable the sniper to easily move into position. The discreet carry case has no resemblance to a bag that would contain a firearm. The Swiss engineered suppressor is integrated on the weapon but can be removed for transport without changing the point of impact of the round. The sound level produced by this ingenious combination of suppressor, weapon and cartridge is less than 121 dB A, which is quieter than an air rifle. The muzzle flash is also totally eliminated which will enable the operator to remain concealed even during hours of darkness.

Although the .300 Whisper as well as the .300 AAC Blackout were designed as a subsonic cartridges with maximum sound reduction, there are also supersonic rounds with excellent ballistic performance available. The RUAG SWISS P series of RUAG Ammotec provides several very interesting military grade cartridges in both calibres, suitable for the SPR300. Given this variety of premium ammunition, the sniper is prepared for any task that may arise. See ammunition details on backpage.

The SPR300 is ideal for any urban situation where stealth and silence is required. Some of these cases might include destroying street lights, car tires, motion detectors and alarm systems unnoticed or silencing guard dogs and of course sentries.

OSE RIFLE

Optics and mounts

B&T offers a variety of scopes, red dot sights and mounts for fast and accurate target acquisition and engagement (optional accessories).

Extended Top Rail

The 410 mm long top rail (NAR/Picatinny) allows fast and easy mounting of scopes and night vision or thermal optics in perfect alignment.

Lateral Rails

A 95 mm long NAR/Picatinny Rail on each side allows mounting lasers, lights and other accessories.

Integrated Suppressor

This will enable the operator to remove the suppressor from the barrel without losing zero. The suppressor is so effective that the actual noise produced by a subsonic round will be around only 121 dB A with no flash at all. Suppressor life is minimum 10,000 rounds.

Quick Detachable Bipod

Several bipods are available. All are lightweight and quickly detachable. They can be hinged down and extended when necessary.

Lower Accessory Rail

Upon customer request the lower rail could be a UIT type or a NAR/Picatinny Rail, allowing to mount bipods, slings or other accessories.

Hard Anodized Aircraft Aluminum Receiver

The solid but lightweight receiver guarantees maximum accuracy. The SPR300 is available in Matt Black as well as in Coyote Tan.
